*Answer with at least 3 features in each section*

| | **Urgent** | **Not Urgent** |
|---|---|---|
| **Important** | **Do - (Your MVP)**<br>● have a way to simulate laps in a race to show tire degradation and lap position<br>● prompt the user on which tire compound they should choose (soft, medium, hards) or to stay out.<br>● Provide user with current lap and total race distance<br>● Calculate and award the user points based on their decision | **Schedule - (For V2.0+)**<br>● Changing weather, like rain makes a huge difference in strategy.<br>● Saving current session to continue later on.<br>● Like the F1 games, introducing a career gamemode which tracks performance through many seasons.<br>● Save scores in a file called scores.txt |
| **Not Important** | **Delegate - (Use a library)**<br>● Use java.io.* and its IO.readln to grab user inputs.<br>● Use things already provided in java such as math.random to ensure that the program creates multiple race scenarios.<br>● Using things like String.format() to be able to give the output. | **Delete - (Cut it)**<br>● Make it into a proper game with a user interface and track displays<br>● If a real F1 race is ongoing, sync it with that and allow users to simulate the live race with their decisions.<br>● Multiplayer gamemode where everybody one driver's race strategy. |
